ABSTRACT OF THE DISCLOSURE

A virtual reality method provides, first, a plurality of images, and these images are connected in series as an image sequence. Then, a pointer pointed to a target-image in the image sequence. Then, a pointer pointed to a target-image in the image sequence is provided. A direction signal is received, and the pointer points to an adjacent image next to the target-image when the direction signal is a first direction; and the pointer points to an adjacent image previous to the target-image when the direction signal is a second direction.
